

GALLA CHAITANYA

Full Stack Developer | React • Next.js • Node.js • TypeScript • PostgreSQL • AI Agents
Hyderabad, India | +91 8374790308 | chaitanyagalla1813@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Full Stack Developer with 1+ year of experience building production-grade web apps with React, Next.js, TypeScript, Node.js, and PostgreSQL. Built debounced search flows that reduced repeated DB requests and improved search performance by 70%. Currently building AI agent systems with Google ADK, Gemini, and LiteLLM, including a resume-job matching agent.

TECHNICAL SKILLS

Frontend: React.js, Next.js 14, JavaScript (ES6+), TypeScript, Tailwind CSS, ShadCN UI, HTML5, CSS3, Responsive Design

Backend: Node.js, Express.js, REST API Design, Prisma ORM, Mongoose ODM, WebSockets, FastAPI

Databases: PostgreSQL (Indexing, Query Optimization), MongoDB, Redis (Caching, Rate Limiting), SQLite

AI / Agents: Google ADK, LiteLLM, Groq, Pydantic, Prompt Engineering, RAG, Tool Use

Auth & Security: JWT, OAuth 2.0, RBAC, Helmet, CORS, Rate Limiting, Zod Validation

DevOps & Cloud: AWS EC2, Docker, CI/CD Pipelines, GitHub Action

Tools: Git, GitHub, Postman, FFmpeg

EXPERIENCE

Full Stack Developer | SkillHigh

Jul 2025 – Mar 2026

- Architected a full-stack CRM platform with React, TypeScript, Tailwind, ShadCN UI, Express.js, Prisma, and PostgreSQL (Neon DB), enabling lead management, sales tracking, and workflow automation for 500+ user records.
- Engineered Redis caching and PostgreSQL indexing strategies, reducing query load by 60% and search response times from 800ms to 240ms (70% improvement).
- Designed role-based analytics dashboards for 3 user roles; deployed to AWS EC2 with zero-downtime GitHub Actions CI/CD.
- Implemented debounced field-based search and filtering across 15+ data fields for large-volume record retrieval.

Full Stack Developer Intern | SkillHigh

Mar 2025 – Jun 2025

- Built a full-stack Hospital Management System (MERN) handling 4 user workflows: patient registration, doctor onboarding, appointment scheduling, and admin operations.
- Implemented JWT auth with HTTP-only cookies and granular RBAC for Admin, Doctor, and Patient roles, ensuring zero unauthorized access across all endpoints.
- Optimized REST APIs with Redis caching, compound indexes, and debounced search, eliminating repeated DB requests and improving average response time by 60%.
- Delivered modular backend services and 20+ reusable React components, cutting feature development time by 40%.

PROJECTS

Job Scout Agent — AI Resume-Matched Job Search | Python, Google ADK, Gemini 2.0 Flash, FastAPI, Apify, Adzuna, LiteLLM, Pydantic

- Engineered a production single-agent AI system using Google ADK and Gemini 2.0 Flash orchestrating 8 tools to autonomously search, filter, and rank jobs against a candidate resume; deployed via FastAPI + Uvicorn with ADK auto-generated endpoints.
- Implemented a 3-layer resume parsing pipeline (local PDF extraction → LiteLLM via Groq/NVIDIA NIM → Gemini Vision fallback) with Pydantic-validated models for zero-garbage profile extraction across all resume formats.
- Designed a deterministic 0–100 job-matching scoring engine with 4 weighted signals (skill coverage, title alignment, experience gap, keyword overlap) across a 100+ skill ontology, outputting explainable verdicts and hard-blocker flags.
- Integrated Apify scraping actors and Adzuna REST API with automatic fallback, BeautifulSoup HTML parsing, and ADK session-state persistence for multi-turn resume-aware searches across 5 countries.

AI-Powered YouTube Shorts Automation | Python, Groq, Edge TTS, MoviePy, FFmpeg, SQLite, YouTube Data API

- Orchestrated an end-to-end AI video pipeline automating script generation, TTS narration, scene rendering, and YouTube upload, producing 50+ Shorts with zero manual intervention.
- Engineered multilingual workflows with 6-scene storyboard generation, AI image creation via Pollinations, and word-boundary subtitle sync; maintained 95%+ pipeline uptime via SQLite-backed retries and asset cleanup.

VideoSave — Full-Stack Video Downloader | Next.js 16, TypeScript, Prisma, PostgreSQL, Vercel Blob, yt-dlp, Zod

- Built a multi-platform downloader for YouTube, Instagram, and X using Next.js App Router APIs, validated URL intake, drag-and-drop UX, and authenticated or guest download history.
- Implemented background download processing with youtube-dl-exec/yt-dlp, FFmpeg merging, Prisma-backed progress/status tracking, and 2.5-second client-side status polling.
- Added secure delivery flows with Vercel Blob in production, local media fallback for development, Google OAuth sessions, anonymous cookies, rate limiting, ownership checks, and Zod validation.
